Empfohlener Antrieb
Recommended actuator

Doppelte Kraftanbindung

Die Last wird an beiden Wellenenden unterstützt.

Doppelte Kraftanbindung

Die Last wird an beiden Wellenenden unterstützt. Der obere Teil der Halterung wird auf den Wellenflansch geschraubt, der untere Teil ist mit einer Zugstange durch die Wellenbohrung gesichert.

STRADDLE MOUNTING

The load is supported at both ends of the shaft. The upper portion of the bracket is bolted to the shaft flange, the lower portion is secured by a tie rod passed to the shaft bore.

Der Hersteller empfiehlt bei Sicherheitsbezogenen Anwendungen die doppelte Kraftanbindung.

For safety related applications dual mounting is recommended by manufacturer.

Straddle mounting

The load is supported at both ends of the shaft.

Einfache Kraftanbindung

Die Last wird nur an einem Ende der Welle am Wellenflansch verschraubt.

Zuganker
Tie rod

Ja/Nein
yes/no

Einfache Kraftanbindung

Die Last wird nur an einem Ende der Welle am Wellenflansch verschraubt.

CANTILEVER MOUNTING

The load is bolt mounted to the shaft flange and only supported at one end of the shaft

Bei kritischen Anwendungen wird die einfache Kraftanbindung nicht empfohlen.

For critical applications single mounting is not recommended.

Cantilever mounting

The load is mounted to only one end of the shaft.

Es gelten ausschließlich unsere allgemeinen Verkaufs- und Lieferbedingungen! Bei Lieferungen für den amerikanischen Markt müssen die Garantiebestimmungen mit der HKS Dreh-Antriebe GmbH gesondert vereinbart werden.

Only the terms of sales and delivery from HKS Dreh-Antriebe GmbH are valid. For deliveries to the American market, warranty information has to be separately agreed with HKS Dreh-Antriebe GmbH.

Garantieinformationen
Warranty information

Die Garantiezeit beträgt max. 1 Jahr ab Versanddatum. Bei Missbrauch, Fahrlässigkeit oder Überlastung, und bei nicht genehmigter Veränderung am Produkt, erlischt jeglicher Garantieanspruch. Für folgerichtliche Beanstandungen übernimmt die HKS Dreh-Antriebe GmbH keine Haftung.

The warranty period extends for one year starting on shipping date. Any misuse, negligent handling or overburdening and unauthorised modification of the product will cause any warranty claim to expire. HKS Dreh-Antriebe GmbH is not liable for any complaints due to consequential damages.

Die Gründe für Beanstandungen am Produkt müssen eindeutig dargestellt werden.

The reasons for complaints about the product must be stated unequivocally.

Garantiefälle müssen direkt an die HKS Dreh-Antriebe GmbH, Leipziger Str. 55, D-63607 Wächtersbach-Aufenau gesendet werden. Garantiefälle werden in Form von Reparaturen bzw. Ersatzlieferungen bearbeitet und kostenfrei an den Kunden zurückgeschickt.

Any items making a warranty operative must be shipped directly to HKS Dreh-Antriebe GmbH, Leipziger Str. 55, 63607 Wächtersbach-Aufenau. Such warranty events will be remedied in form of repair or replacement and will be returned to the customer free of charge.

Die HKS Dreh-Antriebe GmbH behält sich das Recht vor, zu jeder Zeit Veränderungen am Design oder der Konstruktion ihrer Produkte vorzunehmen, ohne die Verpflichtung einzugehen, diese Änderungen bzw. Veränderungen auch bei vormals verkauften Produkten vorzunehmen.

HKS Dreh-Antriebe GmbH reserves the right to implement changes to the design or construction of its products at any time without being committed to implement such change or modification in any products sold prior to such change or modification.

Viele HKS-Antriebe sind in Anwendungen eingesetzt, bei denen Fehlbetrieb zu ernststen Schäden und sogar zum Tode führen kann. Die endgültige Entscheidung bei der Auswahl eines geeigneten Produktes der HKS Dreh-Antriebe GmbH liegt in der alleinigen Verantwortung des Kunden. Es sollten Tests mit angewandten Lasten, die der statischen und dynamischen Lastenfrequenz mindestens gleichkommen, durchgeführt werden, um die Eignung des Antriebes für die Anwendung festzustellen.

Many HKS actuators are installed in applications which might result in serious injury or death in case of misuse. The customer is ultimately responsible for choosing the adequate product supplied by the HKS Dreh-Antriebe GmbH. Such decision should be based on prior tests with applied loads, which are at least identical to static and dynamic load frequency, in order to determine the suitability of the actuator for the specific application.

Gefahrenhinweis
Indication of danger

Werden der HKS Dreh-Antriebe GmbH die Einbaudetails und ein vollständig ausgefülltes „Datenblatt zur Größenbestimmung und zur Gefahrenanalyse“ zur Verfügung gestellt, kann gewährleistet werden, dass der geeignete Antrieb für die Anwendung ausgewählt wurde. Die Sicherheit der gesamten Einbauintegrität von Produkten der HKS Dreh-Antriebe GmbH liegt in der letztendlichen Verantwortung des Kunden.

Be sure to transmit installation details and the completed form „Data sheet for determining sizes and hazard analysis“ to HKS Dreh-Antriebe GmbH in order to assure the appropriate actuator is chosen for the application. The customer is ultimately responsible for safety of the entire installation integrity of products supplied by HKS Dreh-Antriebe GmbH.

Wenn diese Warnung unklar ist oder Sie andere Fragen haben, kontaktieren Sie bitte die HKS Dreh-Antriebe GmbH.

Please contact HKS Dreh-Antriebe GmbH in case you have any questions about this warning or any other related issues.

Functional description

The oil pressure supplied via connections P1 or P2 generates a rotary movement on the actuator flange (F) (Fig.1). Here the linear movement of the piston is converted by helical gear running in opposite directions on the housing, piston and shaft to a rotary movement.

Direction of rotation

Due to the admission of pressure in P1 the actuator flange (F), with shaft rotates to the left from the initial position, see Fig.2 (counter-clockwise when viewed in the direction of the actuator flange). A change of direction of rotation is possible as a special version. All mobile rotary actuators are delivered in the front end position.

Angle of rotation

The actuators in the M-DA-H series are available with a standard angle of rotation of 180° and 360°. In addition to the standard angle of rotation, any additional angle of rotation is available.

Pressures, seals and temperatures

The M-DA-H series is designed for a maximum working pressure of 210 bars. Mineral oils to ISO-VG-46 are recommended. The actuators with standard seals should be operated within the temperature range of -18°C to +70°C. Please consult the factory if they are to operate at higher or lower thermal loads.

The advantages of the M-DA-H series

- No internal leakage
- Precise positioning without deviation
- Any intermediate angle of rotation possible
- Direct securing of load on one or both sides
- Through shaft hole
- High bearing load capacity
- Harmonic design
- Compact solution
- Use of high quality, high strength materials
- Sealing material from reputable manufacturers

Special requirements can be met wherever possible.

Technical data type M-DA-H 50 180°

Order no.: 200518009917

Angle of rotation		180°
Nominal torque	Nm	190
Max. working pressure	bar	210
Weight	kg	~7,4
Absorption volume	dm ³	0,073

You will find further technical data on the next page

Cycle times

In regular rotary movement the cycle times should be no faster than 5 seconds for a rotary movement of 180° and 10 seconds for one of 360°. The values indicated are effective values and lower values are not permitted. In a multi-shift operation and where the continuous stresses are very high, we recommend considering a safety factor of 70% of the maximum permissible torque.

General characteristics

The rotary actuators in the M-DA-H series are designed principally for the mobile range. Based on the helical gear technique, a compact solution has been produced for a max. working pressure of 210 bars and a torque of up to 2900 Nm. The harmonic design and compact structure complete the overall image on a positive note. Rotary movements are possible in both directions. The use of high quality materials guarantees extremely long service life. In the actuator there is a drilled hole for cables and pipes, but alternatively this hole may be used for a tie rod for transferring high bending moments.

Typical applications

The applications range from automotive engineering, working platforms and control of construction machinery through fire fighting working baskets to concrete conveyor belts etc. You may obtain information on further possible applications from the manufacturer.

Functional description

The oil pressure supplied via connections P1 or P2 generates a rotary movement on the actuator flange (F) (Fig.1). Here the linear movement of the piston is converted by helical gear running in opposite directions on the housing, piston and shaft to a rotary movement.

Direction of rotation

Due to the admission of pressure in P1 the actuator flange (F), with shaft rotates to the left from the initial position, see Fig.2 (counter-clockwise when viewed in the direction of the actuator flange). A change of direction of rotation is possible as a special version. All mobile rotary actuators are delivered in the front end position.

Angle of rotation

The actuators in the M-DA-H series are available with a standard angle of rotation of 180° and 360°. In addition to the standard angle of rotation, any additional angle of rotation is available.

Pressures, seals and temperatures

The M-DA-H series is designed for a maximum working pressure of 210 bars. Mineral oils to ISO-VG-46 are recommended. The actuators with standard seals should be operated within the temperature range of -18°C to +70°C. Please consult the factory if they are to operate at higher or lower thermal loads.

The advantages of the M-DA-H series

- No internal leakage
- Precise positioning without deviation
- Any intermediate angle of rotation possible
- Direct securing of load on one or both sides
- Through shaft hole
- High bearing load capacity
- Harmonic design
- Compact solution
- Use of high quality, high strength materials
- Sealing material from reputable manufacturers

Special requirements can be met wherever possible.

Technical data type M-DA-H 80 180°

Order no.: 200818009886

Angle of rotation		180°
Nominal torque	Nm	1073
Max. working pressure	bar	210
Weight	kg	~26,5
Absorption volume	dm ³	0,346

You will find further technical data on the next page

Cycle times

In regular rotary movement the cycle times should be no faster than 5 seconds for a rotary movement of 180° and 10 seconds for one of 360°. The values indicated are effective values and lower values are not permitted. In a multi-shift operation and where the continuous stresses are very high, we recommend considering a safety factor of 70% of the maximum permissible torque.

General characteristics

The rotary actuators in the M-DA-H series are designed principally for the mobile range. Based on the helical gear technique, a compact solution has been produced for a max. working pressure of 210 bars and a torque of up to 2900 Nm. The harmonic design and compact structure complete the overall image on a positive note. Rotary movements are possible in both directions. The use of high quality materials guarantees extremely long service life. In the actuator there is a drilled hole for cables and pipes, but alternatively this hole may be used for a tie rod for transferring high bending moments.

Typical applications

The applications range from automotive engineering, working platforms and control of construction machinery through fire fighting working baskets to concrete conveyor belts etc. You may obtain information on further possible applications from the manufacturer.
