

SPECIALIST IN HYDRAULIC
AND ELECTROMECHANICAL
DRIVE TECHNOLOGY

■ COMPLETE SOLUTIONS FROM A TO Z

■ CUSTOMER FOCUS

■ HIGH QUALITY OF PRODUCTS AND SERVICES

■ QUICK OPERATION DUE TO SHORT COMMUNICATION LINES

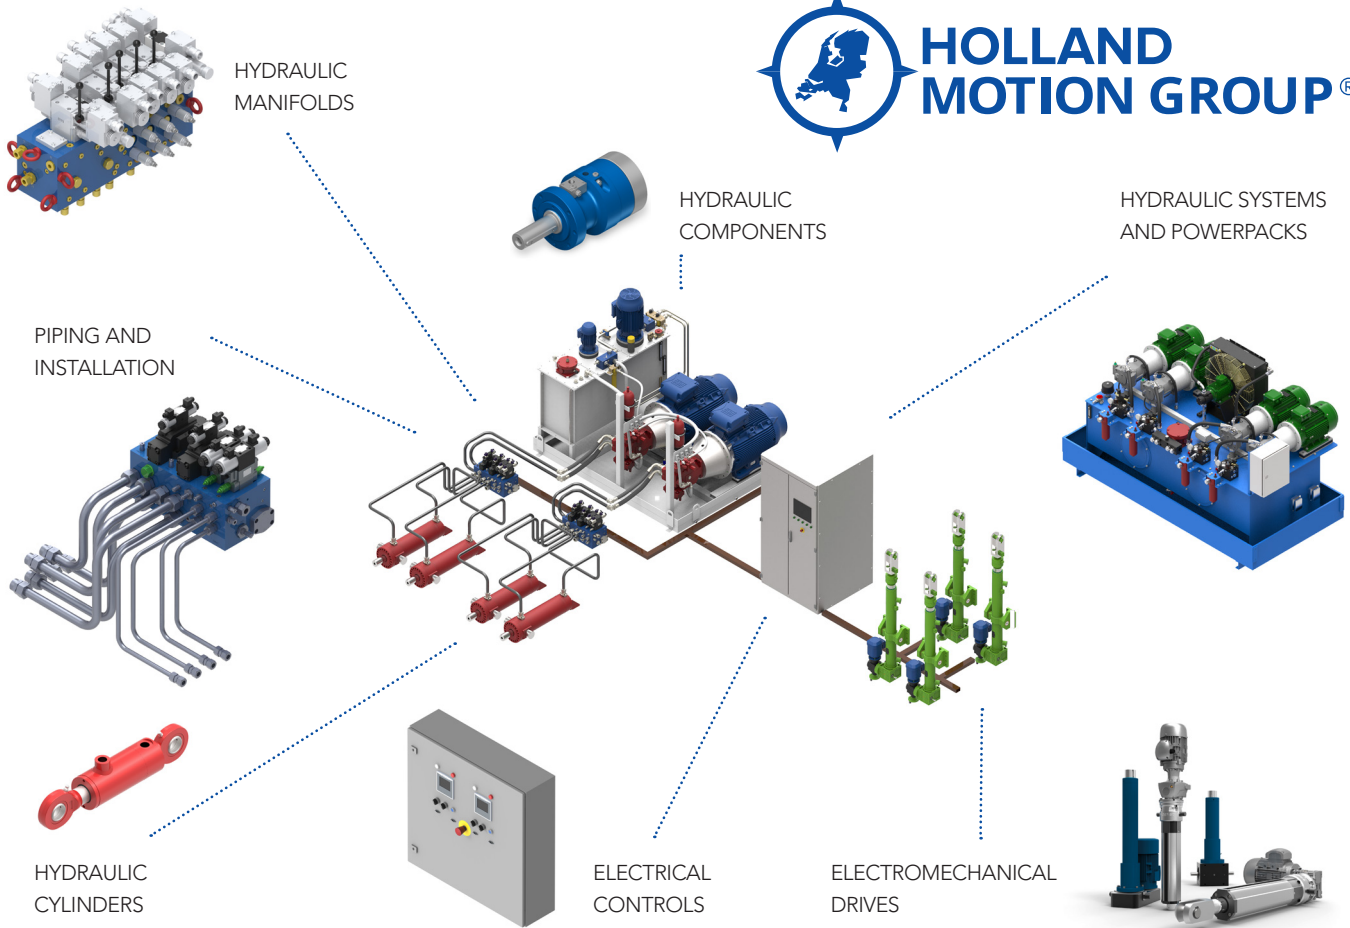

■ QUICK AND CORRECT DELIVERY

■ AVAILABLE 24 HOURS A DAY

WE OFFER OUR CUSTOMERS

- Advice
- Engineering
- Production
- Controls
- Installation
- Commissioning
- Service and (preventive) maintenance
- (Turnkey) installation
and system engineering
- Components
- 24/7 emergency service
- Complete installation
of hydraulic piping systems
- Modifications
- Repair and overhaul of hydraulic
systems and cylinders

Holland Motion Group is a collaboration of organisations that are specialized in hydraulic and electromechanical drive technology. With our extensive know-how, and more than 25 years of experience, we offer high-quality, complete solutions, components, (turnkey) systems, service, overhaul and maintenance entirely according to the demands of the industry and the customer. Over the years we have acquired a well-established reputation, serving our customers around the world as a reliable partner.

Being a specialist in both drive technologies, we are able to advise and support the customer in determining which drive technology is most suitable for their specific application.

We manage the entire process from A to Z:

- Advice;
- Design;
- Production;
- Installation;
- Commissioning;
- Service and maintenance.

We supply all hydraulic and electromechanical systems (including associated controls), components and service to customers in the industrial, maritime and offshore market. Quality, customer orientation, and safety are always of utmost importance to us.

Holland Hydraulics B.V. is Holland Motion Group's specialist in hydraulic drive technology. The family business was founded in 1994 and focuses on complete hydraulic systems, components and service, offering the customer a comprehensive solution. In the past 25 years, Holland Hydraulics acquired a renowned position that has proven their expertise in the hydraulics sector.

ENGINEERING

Our skilled engineers design and develop complete customized hydraulic power units, systems and manifolds. These are adapted to the application specific requirements of the industry and the customer: from the basic technique to very detailed designs to customer specifications, and 3D drawings.

Also for applications with special conditions, such as in hazardous areas for which ATEX certification is required, or where UL/CSA certification is required, we can provide the customer with a comprehensive solution. The customer is guided and advised throughout the entire project; whether it concerns a small unit of 3kW, a large system of 3 x 200kW or a complete turnkey installation.

COMPONENTS

All hydraulic components offered to our customers and that are used in the hydraulic systems, are A-brands only. We only work with established manufacturers who share our core values, such as sustainable products and high quality standards. In order to be able to offer our customers a wide range of high-quality hydraulic components, such as cylinders, rotary actuators, stainless steel components, flow dividers, pressure intensifiers and filters, we are proud partners of renowned manufacturers:

SERVICE

We offer service and maintenance for hydraulic systems in a time-efficient manner and without loss of quality, because we understand that downtime in the production process can have a major impact and that downtime needs be kept to a minimum. Therefore, we offer 24/7 service. The short internal lines of communication enable us to respond quickly and adequately when a customer requests service. With our mobile workshop we are able to provide fast and efficient service at location.

WE OFFER OUR CUSTOMERS

- Service (24/7);
- Installation of own systems and power packs;
- Commissioning;
- Overhaul and repair;
- (Preventive) Maintenance;
- Testing, monitoring and verification;
- Remote and on-site support;
- Documentation and training.

PIPING SYSTEMS

We design, install and commission hydraulic piping systems on-site. Our service engineers are equipped with the most modern tools, such as mobile bending machines and press equipment. This enables us to serve our customers optimally. For long term or complex projects, our mobile workshop is used, so that the hydraulic piping can also be manufactured on-site.

REPAIR, OVERHAUL AND MAINTENANCE

To keep downtime and high costs due to worn and damaged systems and/or cylinders to a minimum, we offer a repair and overhaul service. This can be done at the customer's location or in our workshop, which is fully equipped with modern machinery and testing facilities.

In addition, we can provide the customer with scheduled maintenance, either in our workshop or at location. This, to ensure that the installed systems continue to function optimally.

Within the Holland Motion Group, Holland Actuators B.V. is the specialist in electromechanical drive technology. Holland Actuators focuses on customerspecific and complete (turnkey) electromechanical solutions and in recent years it has developed into a reliable partner for electromechanical systems, components and service.

COMPLETE SYSTEMS INCLUDING CONTROLS

The complete electromechanical systems are custom-designed by our skilled engineers, and developed and adapted to the application specific requirements of the industry and the customer. In order to provide the customer with the best possible service, we guide and

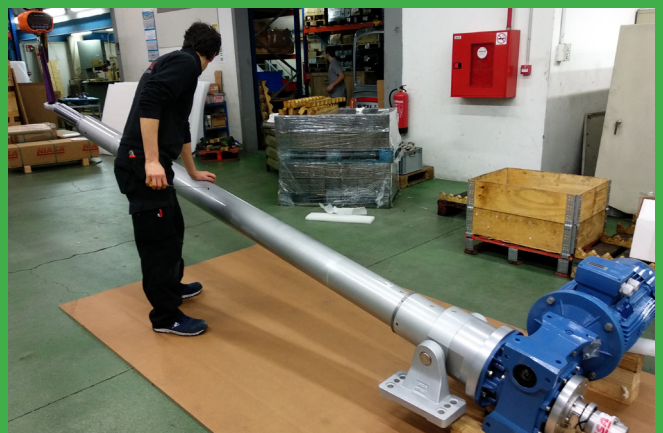

advise the customer throughout the entire process, from A to Z. We supply the electromechanical systems including electrical controls. Like the systems, the electrical controls are entirely in accordance with the guidelines and are constructed according to the latest techniques.

COMPONENTS FOR SPECIFIC APPLICATIONS

We offer our customers high quality electromechanical components, which are used as specials in customer specific solutions. The components are linear actuators for very specific machines and installations. The components are unique, accurate, reliable and durable.

The components we offer the customer are:

- Linear actuators;
- Screw jacks;
- Bevel gearboxes;
- Linear tables;
- Rodless mechanical cylinders;
- Accessories.

CERTIFICATES, STANDARDS AND REGULATIONS

All hydraulic and electromechanical systems, components and service are in accordance with the quality and safety standards and regulations required by the industry and the customer.

The certificates and approvals for quality, safety, health and environment are proof of expertise. These guarantee the customer that we work consistently according to the quality, health and safety standards as required in the various industries. This is mandatorily verified by our dedicated managers and by the official authorities.

We are NEN-EN-ISO 9001:2015 and VCA** (2008:5.1) certified and work according to the following standards and regulations: AQAP, ATEX, BV, GL/DNV, Lloyds, MIL, UL/CSA.
